RUNWELL DURHAM DRAINAGE COMPANY

Observe the water path

Property address and observation date

What part of the property do you want to use again?

When did the water appear, and when did the area become usable?

Sketch the route from source to receiving area.

Include roof outlets, paved edges, wet ground, visible inlets and the known outlet.

Mark unknown buried routes separately. Which facts still need checking?

Access, restoration or shared responsibilities to discuss

Observe from safe ground. Leave heavy covers, utilities and moving water alone.

Compare two written estimates

Record what each proposal actually includes. Ask about any empty item.

Scope detail	Proposal A	Proposal B
Result and affected area		
Collection method		
Pipe route and material		
Outlet and permissions		
Retained components		
Access and buried services		
Soil disposal and restoration		
Care and cleaning access		
Allowances and exclusions		

What finding could change either price or the work required?

Keep photographs, permissions and the accepted scope with the route record.
